# Chlamydia Testing Data 2011/12

## Primary Care Trust (PCT) and Strategic Health Authority (SHA) specific tables

1st April 2011 to 30th September 2011

---

### Chlamydia denominator data 2011/12:

Population data for 2011/12 are derived from the mid 2009 ONS population estimates.

### Notes on using these tables:

Chlamydia tests reported to the NCSP are based on young people aged between 15 and 24 years and includes tests where sex is male, female, and unknown/unspecified. Data is as of 03/11/2011 and includes tests where sex is male, female, and unknown/unspecified. These data may not reflect all screens/tests performed.

Data include all tests - screening tests, diagnostic tests and contacts and are presented by PCT of residence or "attributed" PCT of residence. "Attributed" PCT of residence is assigned for the NCSP return once data are received nationally. Postcode of clinic is used to assign PCT of residence if a patient has not provided a valid postcode of residence.

Data are number of tests and not number of people tested. Please note that number of tests will be used as a proxy for the number of people tested.

Data presented are based on tests with confirmed positive and negative results only. Tests with equivocal, inhibitory and insufficient results have been excluded as most people with these results are retested.

**Please note that as of 1<sup>st</sup> April 2008 partners/contacts reported to the NCSP via the quarterly disaggregate dataset will be included in this table.** Be aware partners/contacts reported via the six monthly aggregate dataset will not count towards these figures.

\* GUM Data for period Jan - June 2011

\*\* Cell size of 1 to 4 and corresponding totals have been masked to protect deductive disclosure in accordance with ONS guidelines.

\*\*\* Half the population has been used in calculating the diagnosis rate since only two quarters data are presented

† 15-24 year old population estimates are the Mid 2009 ONS population estimates

Footnotes:

1. Data as of 03/11/2011 and may not reflect all screens/tests performed. Data include screening tests, diagnostic tests and contacts and include records where sex is male, female, and unknown/not specified. Age range: 15-24 years.
2. Data presented are number of tests and not number of people tested. Please note that number of tests will be used as a proxy for the number of people tested.
3. Data presented are based on tests with confirmed positive and negative results only. Tests with equivocal, inhibitory and insufficient results have been excluded as most people with these results are retested.
4. England total excludes those resident outside of England
5. Missing data presented on last sheet called "Missing Data"
